2022 Head, Department of Respiratory Diseases, University of Montpellier
2013 Full Professor, Respiratory Medicine
2012 Assistant Professor, Respiratory Medicine

GINA 2025 has been improved by extensive review and revised. While these changes may appear subtle, they introduce big changes in clinical practice based on new evidence generated. Established and emergent biomarkers are offering key insights for the present but also for the future. This informs either clinicians and patients of optimal ways of management.
